

# CoMix social contact survey: Report for Greece rounds 1 to 7

*Amy Gimma, Kerry Wong, Kevin Van Zandvoort, CMMID COVID-19 Working Group, Christopher Jarvis, John Edmunds*  
London school of Hygiene and Tropical Medicine.

Created as part of the EpiPose project, funded by the EU Horizon 2020 Research and Innovations Programme - project EpiPose (Epidemic Intelligence to Minimize COVID-19's Public Health, Societal and Economical Impact, No 101003688).

**Report created:** 11 June 2021

**Survey dates:** 05 February 2021 to 04 May 2021

## Introduction & Methods

CoMix is a behavioural survey, first launched on 24 March 2020 in the UK, and launched in Greece on 05 February 2021. The sample is broadly representative of the adult population in Greece. Participants are invited to respond to the survey approximately once every two weeks. This report presents the results from 5 waves of adult data (Wave A1 to Wave A5) and two waves of children data (Wave C1 and Wave C2). In Wave C1 and Wave C2, parents completed the survey on behalf of a child in their household (aged 17 years or less). Participants record direct, face-to-face contacts made on the previous day, specifying certain characteristics for each contact including the age and sex of the contact, whether contact was physical (skin-to-skin contact), and where contact occurred (e.g. at home, work, while undertaking leisure activities, etc). Participants are instructed to report contacts individually, but are also given the opportunity to report aggregated estimates of the contacts made by age group and setting, in case they did not list all contacts individually. Further details have been published elsewhere[1,2]. The contact survey is based on the POLYMOD contact survey[3].

We calculated and plotted the crude mean number of contacts by setting, duration, and participant to contact age groups. We used the settings home, work and school (including all educational establishments, including childcare, nurseries and universities and colleges), and "other" (mostly leisure and social contacts, but includes shopping), and report . We look at the mean contacts by age and survey wave. The mean number of contacts is influenced by a few individuals who report very high numbers of contacts (often in a work context). We show means for all contacts and means number of contacts after truncating the maximum number of contacts recorded at 50 per individual per day.

We calculated the mean contacts for the contact matrices by using the socialmixr R package [4], with 1000 bootstrapped samples. We used the World Population Prospect data from 2015 for country specific population estimates by age and gender, which is the latest available data in the socialmixr package. We constructed age-stratified contact matrices for nine age-groups (0-4, 5-11, 12-17, 18-29, 30-39, 40-49, 50-59, 60-69, and 70+). For contacts, we do not have exact ages and therefore sampled from the reported age-group.

To complete the symmetric contact matrices that capture contacts by both adults and children, we combined each wave of the adult data with

- children who attended school,
- children who did not attend school,
- Wave C1, and
- Wave C2.

The first two scenarios capture contacts that are specific to school attendance status. The result should be interpreted with caution when the number for children who went to school were very low. The latter two scenarios are specific to the data collection periods of Wave C1 and Wave C2.

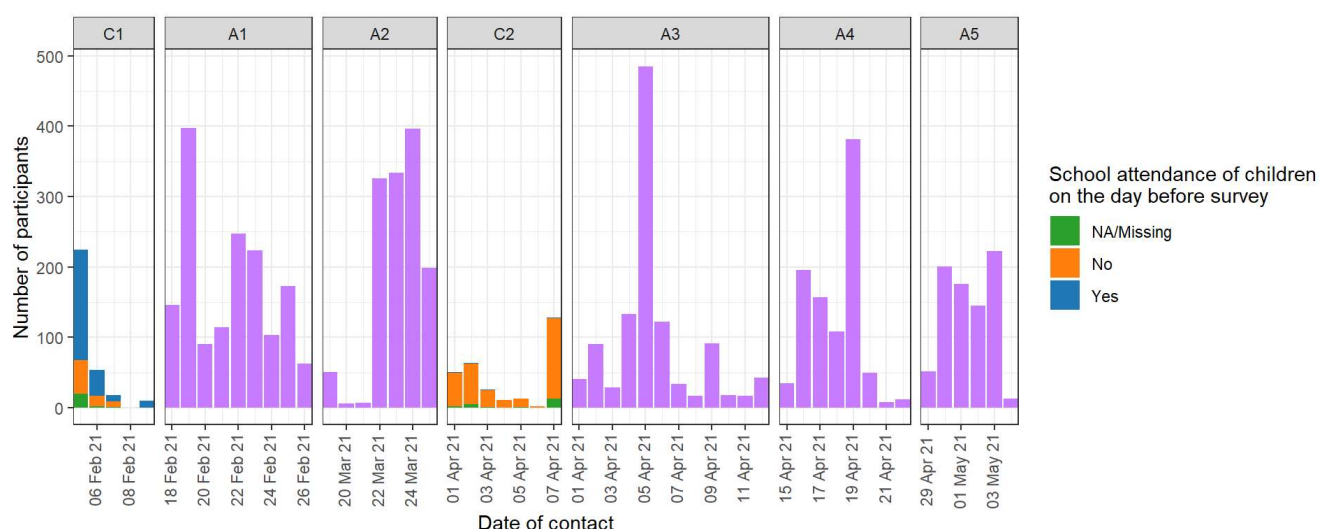

## Timeline

The CoMix survey in Greece has had 5 waves of data collection covering the period between 05 February 2021 and 04 May 2021 from adults. Figure 1 shows survey response by date

Wave	C1	A1	A2	C2	A3	A4	A5
Start date	05 Feb 2021	18 Feb 2021	19 Mar 2021	01 Apr 2021	01 Apr 2021	15 Apr 2021	29 Apr 2021
End date	09 Feb 2021	26 Feb 2021	25 Mar 2021	07 Apr 2021	12 Apr 2021	22 Apr 2021	04 May 2021
Participants	307	1557	1319	295	1120	948	810
Contacts	2454	7616	15882	1098	4444	3493	2211

**Table 5. Crude mean contacts by participant age group for each wave.** Children data is disaggregated by school attendance status.

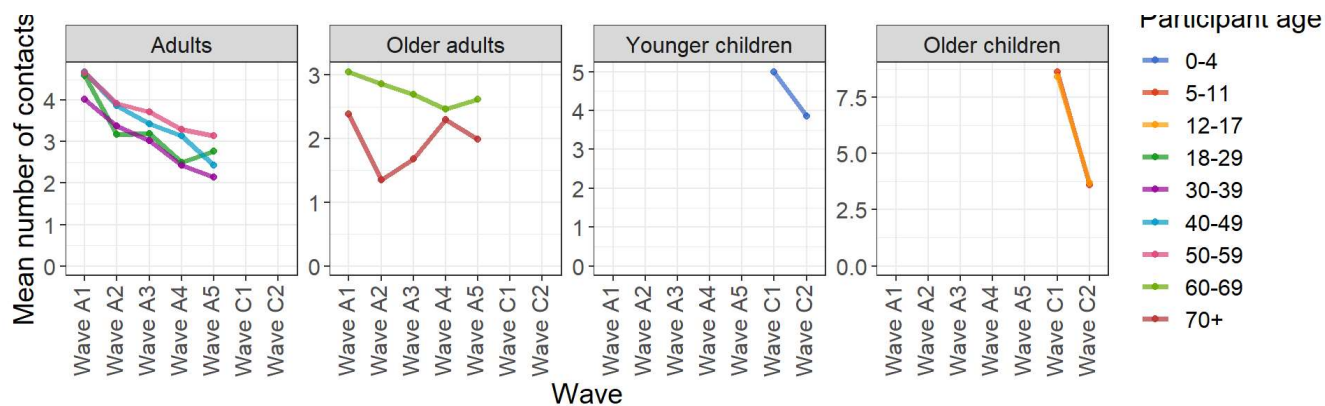

## Contact Matrices

All contacts

**Figure 5. Contact matrices by wave.** Contacts truncated to 50 per participant per day, adjusted for day of week.

**Figure 6. Adjusted contact means by participant age group.** Contacts truncated to 50 per participant per day, adjusted for day of week.

Participant age	Wave A1	Wave A2	Wave A3	Wave A4	Wave A5	Wave C1	Wave C2
0-4	NA	NA	NA	NA	NA	4.99	3.85
5-11	NA	NA	NA	NA	NA	8.61	3.60
12-17	NA	NA	NA	NA	NA	8.40	3.70
18-29	4.59	3.17	3.19	2.50	2.76	NA	NA
30-39	4.01	3.37	3.03	2.42	2.14	NA	NA

Participant age	Wave A1	Wave A2	Wave A3	Wave A4	Wave A5	Wave C1	Wave C2
40-49	4.68	3.86	3.43	3.14	2.44	NA	NA
50-59	4.67	3.92	3.71	3.28	3.15	NA	NA
60-69	3.04	2.86	2.69	2.46	2.62	NA	NA
70+	2.38	1.35	1.68	2.29	1.99	NA	NA

**Table 6. Adjusted contact means by participant age group.** Contacts truncated to 50 per participant per day, adjusted for day of week.

## Combined contacts

**Figure 7. Symmetric combined matrices by wave.** Adult survey waves each combined with

A. children who attended school,

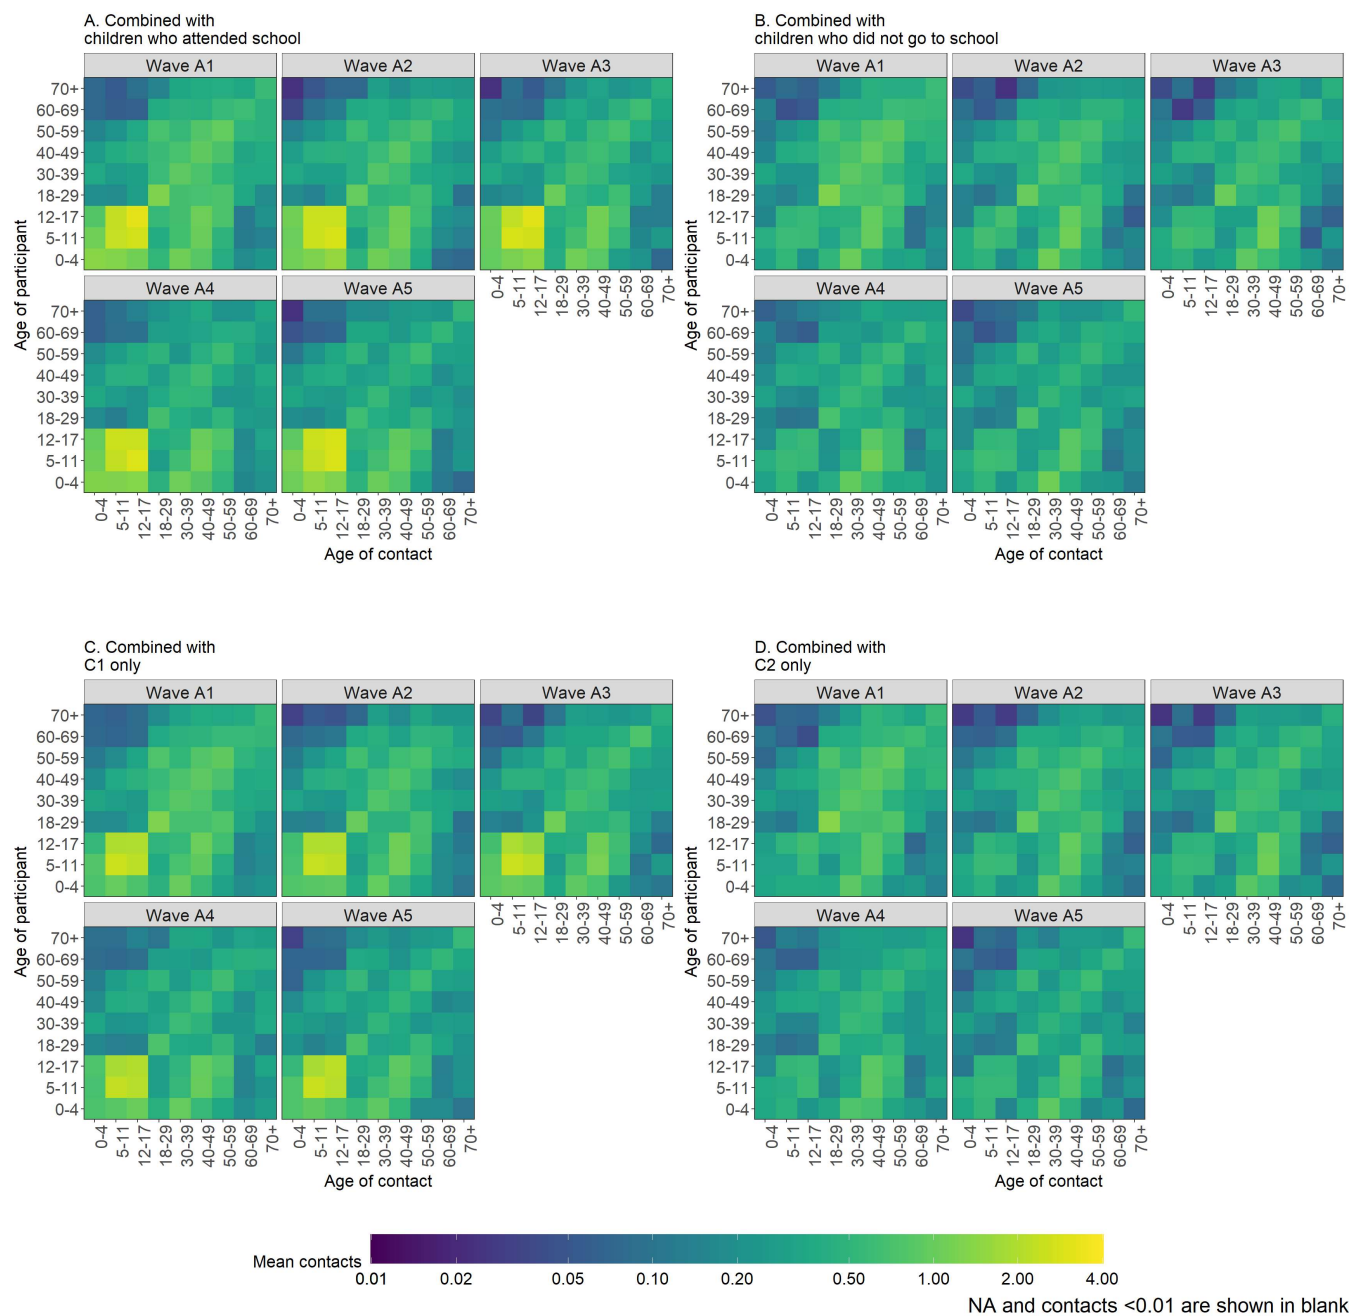

B. children who did not attend school to provide an estimate of overall contacts,

C. Wave C1 (Wave C1 data collected between 05 February 2021 and 09 February 2021), and

D. Wave C2 (Wave C2 data collected between 01 April 2021 and 07 April 2021).

Sub-plots A and B are specific to the different contexts of school attendance, and sub-plots C and D are specific to the data collection periods of Wave C1 and Wave C2, respectively.

Contacts truncated to 50 per participant per day, adjusted for day of week and country population by age using the World Population Prospect population data.

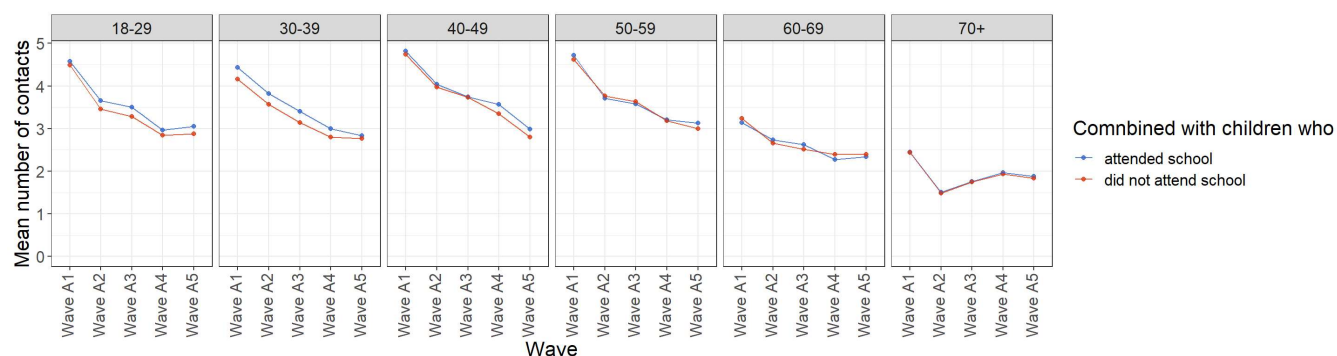

**Figure 8. Combined contact means by wave.** Contact means as calculated from symmetric, combined symmetric matrices. Adult survey waves each combined with

A. children who attended school, and

B. children who did not attend school.

Contacts truncated to 50 per participant per day, adjusted for day of week and country population by age using the World Population Prospect population data.

Participant age	A. Combined with children who attended school					B. Combined with children who did not attend school				
	Wave A1	Wave A2	Wave A3	Wave A4	Wave A5	Wave A1	Wave A2	Wave A3	Wave A4	Wave A5
