REYNA JOIE REMOTIN

Country of origin: The Philippines

Programme: Master Transportation Sciences (ICP Connect scholarship)

Graduated: 2026

I was a Road Safety Engineer at the Department of Public Works and Highways in 2015 and have always been passionate about saving lives through effective engineering interventions. Pursuing a master's degree in road safety through a full scholarship was both a great privilege and an ideal opportunity to strengthen my knowledge, expertise, and professional credentials in the field.

The programme exposed me to international best practices in road safety and gave me a deeper understanding of the multidisciplinary nature of the profession. The knowledge and perspectives I gained continue to influence my work today.

As the current Programme Chair and Professor of the Bachelor of Science in Civil Engineering, I have found that the programme has helped me approach topics with greater intention and relevance to real-world engineering practice. It has enriched both my professional work and my teaching.

I encourage my students to seek international experiences and broaden their professional horizons. Such opportunities provide valuable new perspectives on the challenges and needs of our country, the Philippines, while also connecting them with like-minded professionals who are committed to creating better outcomes for society.
